

## The Solution

Proven solutions that reduce energy and utility costs; identify building and utility issues in real-time rather than retrospectively; help to meet the rigors of statutory regulation and have a proven return on investment in a number of scenarios.

## Features

- Turn-key end to end monitoring solution for energy, condition and specialised vertical applications
- Non-invasive radio based installation
- Ideal for retrofit
- Manufactured, installed and commissioned by Invisible systems in the UK
- Cloud based central application, reducing IT related issues

## Benefits

- Mature technology that works
- Proven cost reduction
- Sympathetic and none invasive
- Rapid implementation, minimal disruption to business
- Hierarchical application, allowing active energy management by approved staff and provides a management portal to a business energy consumption and status.

## Overview

Invisible Systems works with business in a number of ways from, off the shelf, turn-key, energy management solutions to bespoke condition monitoring applications through to specialised vertical application in food production and manufacturing, laundries and vehicle location and condition monitoring.

We are an established enterprise with strong and structured implementation procedures to best ensure a successful implementation. Our four phase approach to project implementation enables full customer involvement with identification of need and outcome objectives.

### Four Phases

1. Development and agreement of requirements
2. Full functional specification identifying both the expected functions of the solution but also the expected outcomes and return on investment
3. Fully project managed development and implementation
4. System sign off and transfer to our on-going support team
