## Realtime Online is a reliable, wireless data collection and analysis system ...

100% web-based, Realtime online is perfect for organisations of all sizes. It is a SaaS (software as a service) model capable of being accessed from anywhere in the world by PC or smart device.

Data is collected wirelessly from our range of meters and wireless sensors. Other data may be integrated into Realtime Online from a wide range of systems and formats allowing organisations to collate and manage all aspects of energy and building-related data in a single system.

Realtime Online provides a number of dashboards showing usage and conditions in order to identify possible energy consumption and carbon emission reduction - whether you are looking to analyse data from a single point in a single building or a limitless number of data points across your estate.

### Energy Monitoring

Monitoring, sub metering and targeting is integral to energy management - information that tells you where, when and how much energy is being used enables you to understand how much energy consumption may be reduced.

### Dashboard features

- Realtime view of consumption
- Easy comparison between primary and sub metered targets
- Traffic light condition status for early alert

### Realtime profiling and targeting

Establishing an energy profile for your business is essential in order to target potential areas of energy reduction.

- Half hour profiling of consumption including cost, carbon and units analysis
- Date and period comparison reports
- Multi-site benchmarking and targeting including site variables
- Individual meter comparison reporting
- Threshold alerts by email or text

### Condition Monitoring

Realtime remotely oversees critical asset conditions.

- Email alerts
- Automated reports
- Resolution activity log
- Profiling of conditions vs energy use
- Other monitoring capabilities. HACCP, temperature and humidity reports etc.
